CoSy - Computing Systems Technology Conference

- [Website](#)

CoSy (pronounced like “cozy”) is a Systems Programming Conference open to developers from all walks of life, both professional and non-professional, who want to engage other like-minded individuals for an intimate and wonderful blend of content.

- Broad scope (C++, C, Rust, Zig, FORTH, Nim, OCaml etc.)
- Double-blinded submission reviews

Of course, it's not always possible to double-blind everything! If someone writes a submission about how they wrote a Great Book On Large Scale Software Architecture That's Really Good And Helps You Modularize And Structure Large Software And The Sequel Is Out You Should Buy It Now, they have vastly reduced the pool of people they could be talking about.

FTL - A functional template library for containers processing in C++

- [GitHub](#)
 - [Reddit](#)

FTL is a C++17-based library that provides a more convenient API for collections processing. The API is heavily inspired by the Rust programming language.

```
1 const auto totalVolume = cityTrees.iter()
2   .filter([](const auto &tree) { return tree.kind ==
3     Tree::Oak && tree.diameter > 25; })
4   .map([](const auto &tree) { return tree.volume(); })
5   .sum();
```

Compile 1 Million Lines Of C++ In ~2 Minutes With A 16 Core Ryzen 9 5950x

- Embarcadero
 - Reddit

I love how a shitty, bug-ridden development environment that costs US\$1359 for the most basic edition still requires you to buy a separate US\$139 extension to enable parallel builds, a standard feature available on practically every other closed and open source compiler and build system out of the box for \$0 extra.
