CPPP19 Trip Reports

https://deque.blog/2019/06/17/trip-report-on-cppp-19-the-first-edition-of-the-first-c-french-conference/

Hello World with reflection

```
#include <experimental/meta>
namespace meta = std::experimental::meta;
namespace n {
   struct hello {};
   int world;
int main () {
   static constexpr auto range = meta::range(reflexpr(n));
   for ... (constexpr auto member : range) {
```

Heterogeneous Lookup in Ordered Containers in C++14

Professional, zero-cost setup for C++ projects

Part 1: https://awfulcode.io/2019/04/13/professional-zero-cost-setup-for-c-projects-part-1-of-n/

Part 2: https://awfulcode.io/2019/04/26/professional-zero-cost-setup-for-c-projects-part-2-of-n/

Reddit: https://www.reddit.com/r/cpp/comments/bhqcjh/professional_zerocost_setup_for_c_projects_part_2/

Higher-order functions

Meeting C++ 2018: Björn Fahller - Higher Order Functions for ordinary developers

A **higher-order function** is a function that takes other functions as arguments or returns a function as result.

Take-away messages:

- Avoid using std::function as return type, use auto instead
- Capturing by reference when returning a lambda is dangerous
- Compose functions and give names to compositions
- ► Functional extensions to std::optional and std::expected remove the need for many conditionals

Boost.HOF in Boost 1.68+ (Docs)

PacifiC++ 2018 - Titus Winters - C++ Past vs. Future

https://youtu.be/IY8tHh2LSX4

std::function const correctess bug

```
struct Callable {
 2
       void operator()(){count++;}
 3
       void operator()() const = delete;
 4
       int count = 0;
 5
   };
 6
   void f() {
 8
       Callable counter;
 9
       std::function<void(void)> f = counter;
10
       f();
11
       const auto cf = f;
12
       cf(); // ???
13 }
```

PacifiC++ 2018 - Titus Winters - C++ Past vs. Future (cont.)

std::function requires copyable callables

```
1 void f() {
2    std::unique_ptr<int> up;
3    auto l=[up=std::move(up)](){};
4    std::function<void(void)> f=1; // Build fails
5 }
```

PacifiC++ 2018 - Titus Winters - C++ Past vs. Future (cont.)

ODR violation

```
namespace libs {
inline bool contains(std::string_view needle, std::string_view haystack) {
    assert(needle.size() <= haystack.size()); // !!!
    return haystack.find(needle) != std::string_view::npos;
}
6 }</pre>
```

C++ Developer Ecosystem

https://www.reddit.com/r/cpp/comments/c21ft6/the_state_of_developer_ecosystem_2019_c/

Catch V2.9.0

https://github.com/catchorg/Catch2/releases/tag/v2.9.0

This release replaces the old benchmarking support with a new one, based on donated Nonius code.

Taskflow V2.2.0

Cpp-Taskflow is by far faster, more expressive, and easier for drop-in integration than existing parallel task programming libraries such as OpenMP Tasking and Intel TBB FlowGraph in handling complex parallel workloads.

https://github.com/cpp-taskflow/cpp-taskflow/releases/tag/v2.2.0 (MIT)

Docs: https://cpp-taskflow.github.io/cpp-taskflow/index.html

SFINAE and enable_if

```
